

# GRADE 4

## ELEMENTARY-LEVEL SCIENCE TEST

JUNE 2011 WRITTEN TEST

FOR TEACHERS ONLY

RATING GUIDE FOR PART II

This rating guide contains detailed directions for rating student responses to Part II of the written test in Elementary-Level Science. All raters should become familiar with the detailed directions before beginning to rate student responses.

Appendix A provides a performance levels chart that translates final scores into four performance levels. A conversion chart is also needed to translate a student's raw scores on the written and performance tests to a final score. This chart will be posted on the Department's web site <http://www.p12.nysed.gov/osa/>. Conversion charts provided for previous administrations of this test must *not* be used to determine student's final scores for the 2011 administration of the test.

Appendix B provides four charts that link the individual questions on the test to the *Elementary-Level Science Core Curriculum Grades K-4*. This core curriculum is based on the *New York State Learning Standards in Mathematics, Science, and Technology*.

Any clarifications or changes to this rating guide will be posted on the New York State Education Department website at <http://www.p12.nysed.gov/osa/> during the rating period. Check the "Scoring Information" link at this website before starting the rating process and several times during the rating period.

Questions regarding this test should be directed to the Office of State Assessment at (518) 474-5900.

**Note:** Retain this rating guide for future use. Do *not* return it to SED with the performance test materials.

## Detailed Directions for Rating Part II of the Written Test

This guide contains detailed directions and criteria for rating student responses to the questions in Part II of the written test. Raters should become familiar with the detailed directions and rating criteria before beginning to rate the student responses. Refer to the 2011 Manual for Administrators and Teachers for suggestions about organizing the rating process.

In rating the student responses, follow the procedure outlined below.

1. Familiarize yourself with the system your school is using for processing the answer papers and recording the student scores.
2. Have a test booklet on hand. Read each Part II question carefully. Note exactly what is required.
3. Carefully read the criteria provided in this guide for rating each question.
4. For most questions, examples of acceptable responses are provided. Acceptable responses include, but are not limited to, the examples given. Other responses that convey the same general meaning as those given in this guide should also receive credit. Raters must use their professional judgement to decide if the student's answer meets the criteria. You may find it helpful to discuss questionable student responses with other raters.
5. Acceptable responses separated by a slash (/) are considered to be the same response and should be counted for credit once.
6. Discuss with other raters the requirements of each question and the rating criteria. When you are certain that you clearly understand the requirements and criteria, you are ready to begin rating the student responses.
7. It is recommended that you rate all the student responses to one question or group of questions before proceeding to the next question or group of questions. This method helps ensure that the rating criteria are applied consistently.
8. Students should *not* lose credit for incorrect spelling, grammar, capitalization, or punctuation.
9. In responses to questions where a specific number of answers are required (e.g., identify *three* materials, give *two* examples), if the student provides more than the required number of responses, score only the required number, in the order in which they appear.

10. Record the number of credits you allow for each question in the table provided on the back cover of the test booklet. The maximum number of credits for each question appears in the table.
11. When you have finished rating all the Part II questions, add the credits allowed for each question to obtain the total raw score for Part II.
12. Follow your school's procedure for transferring Part II scores to the student's scannable answer sheet. These are local decisions that depend on the answer sheet your school uses. Some schools will transfer a score for each Part II question while others may transfer a total raw score for Part II. Check to be certain that the student name on the test booklet matches the name on the answer sheet.

### **Online Submission of Teacher Evaluations of the Test to the Department**

Suggestions and feedback from teachers provide an important contribution to the test development process. The Department provides an online evaluation form for State assessments. It contains spaces for teachers to respond to several specific questions and to make suggestions. Instructions for completing the evaluation form are as follows:

1. Go to [www.p12.nysed.gov/osa/teacher/evaluation.html](http://www.p12.nysed.gov/osa/teacher/evaluation.html).
2. Select the test title.
3. Complete the required demographic fields.
4. Complete each evaluation question and provide comments in the space provided.
5. Click the SUBMIT button at the bottom of the page to submit the completed form.

31 [1] Allow 1 credit for any value from 27°C to 31°C.

32 [1] Allow 1 credit for *two* acceptable responses.

Sunrise: 5:45 a.m.          Sunset: 8:19 p.m.

33 [2] Allow a maximum of 2 credits, 1 credit for an acceptable response in *each* unshaded row. Acceptable responses include, but are not limited to:

Property	Tool
weight	spring scale
height	— ruler — tape measure — meterstick — yardstick
mass	— balance — pan balance — balance scale — beam balance

*Unacceptable* responses include:

“scale” or “spring scale” for mass (These measure weight, not mass.)  
“measuring stick” for height (It is not specific enough.)

34 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

- The circuit will be closed.
- The circuit is now complete.
- Metal can conduct electricity.
- Electricity flows through metal.

*Unacceptable* responses include:

The paper clip is metal. (This does not answer the question.)  
It will work/It will make it light. (This is not specific enough.)  
Metals attract electricity. (This is not correct. Metals conduct electricity.)

35 [1] Allow 1 credit for *E* or 330 grams.

- 36 [1] Allow 1 credit if *all three* letters are correctly placed in the chart as shown below.

Simple Machine	Diagram Letter
pulley	B
inclined plane	C
lever	A

- 37 [1] Allow 1 credit. Acceptable responses include, but are not limited to:

- They are closest together.
- The closer the magnets, the stronger the force of attraction.
- The distance between the magnets is the smallest.
- They are only 3.5 cm apart.

- 38 [2] Allow a maximum of 2 credits, 1 credit for each acceptable response. Acceptable responses include, but are not limited to:

- support the plant
- anchor the plant/hold the plant in the ground
- take in water/send water to the leaves
- take in nutrients
- store food

*Unacceptable* responses include:

take in soil

- 39 [1] Allow 1 credit for *two* acceptable responses. Acceptable responses include, but are not limited to:

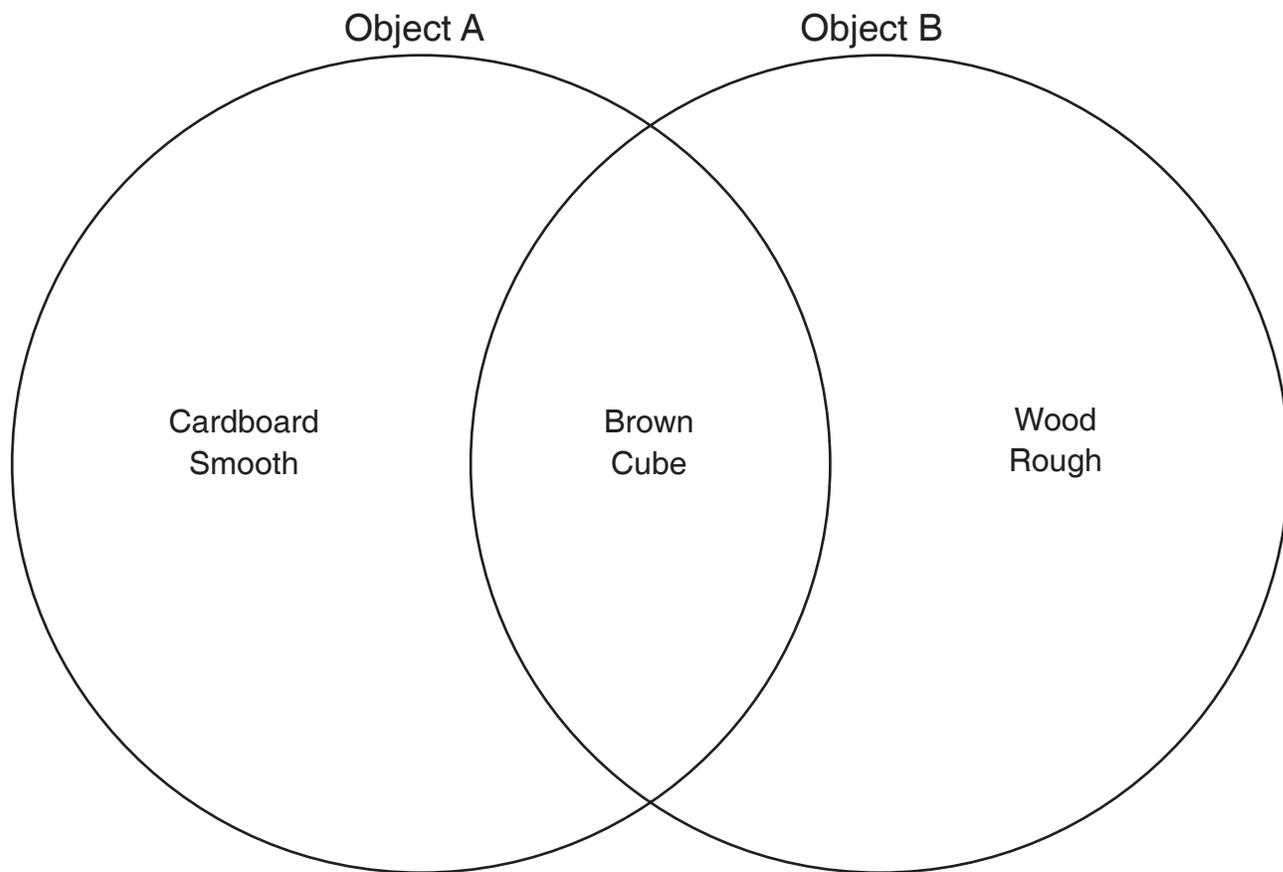

- air/oxygen
- water/rain
- light/sunlight
- nutrients
- carbon dioxide/air
- space

*Unacceptable* responses include:

food (Plants make their own food.)  
soil (Plants do *not* need soil to grow.)  
parts of the plant, flowers, roots, etc.

- 40** [2] Allow a maximum of 2 credits, 1 credit for each acceptable response. Acceptable responses include, but are not limited to:
- carried by the wind/wind
  - stick to animals' fur/animals
  - stick to human clothing/humans
  - float on moving water/water/rain/runoff
  - passed out in animal waste
- 41** [1] Allow 1 credit for *two* acceptable responses. Acceptable responses include, but are not limited to:
- blends in with the forest floor/colors on its shell
  - hides in its shell/hides/hides under water
  - hard shell

42 [1] Allow 1 credit if *all six* observations are correctly placed in the Venn diagram as shown below.

**Note:** Allow credit if the student responds “color” and “shape” (instead of “brown” and “cube”) in the intersecting area.

## **Appendix A**

### **New York State Grade 4 Elementary-Level Science Test June 2011**

#### **Performance Levels Chart**

The chart on the next page defines the four performance levels for this test. The State-designated level of performance for this test is a final score of 65 or higher (level 3 and 4). Students scoring below 65 (levels 1 and 2) must be provided with academic intervention services according to section 100.2(ee)(i) of the Regulations of the Commissioner of Education. The chart provides the score range and a brief description of student performance for each level.

The conversion chart will be posted on the Department's website <http://www.p12.nysed.gov/osa/>.

**Note:** Conversion charts provided for previous administrations of this test must *not* be used to determine students' final scores for the 2011 administration.

**Performance Levels for Final Score  
Grade 4 Elementary-Level Science Test**

Level	Final Test Score Range	Description of Student Performance
4	85–100	<p><b>Meeting the Standards with Distinction</b></p> <ul style="list-style-type: none"> <li>• A student demonstrates superior understanding of elementary-level science content and concepts for the learning standards and key ideas being assessed.</li> <li>• The student demonstrates superior elementary-level science skills related to the learning standards and key ideas being assessed.</li> <li>• The student demonstrates superior understanding of the science content, concepts, and skills required for an elementary-level academic environment.</li> </ul>
3	65–84	<p><b>Meeting the Standards</b></p> <ul style="list-style-type: none"> <li>• The student demonstrates understanding of elementary-level science content and concepts for the learning standards and key ideas being assessed.</li> <li>• The student demonstrates elementary-level science skills related to the learning standards and key ideas being assessed.</li> <li>• The student demonstrates understanding of the science content, concepts, and skills required for an elementary-level academic environment.</li> </ul>
2	45–64	<p><b>Not Fully Meeting the Standards</b></p> <ul style="list-style-type: none"> <li>• The student demonstrates only minimal understanding of elementary-level science content and concepts for each of the learning standards and key ideas being assessed.</li> <li>• The student demonstrates minimal elementary-level science skills related to the learning standards and key ideas being assessed.</li> <li>• The student demonstrates minimal understanding of the science content, concepts, and skills required for an elementary-level academic environment.</li> </ul>
1	0–44	<p><b>Not Meeting the Standards</b></p> <ul style="list-style-type: none"> <li>• The student is unable to demonstrate understanding of elementary-level science content and concepts for the learning standards and key ideas being assessed.</li> <li>• The student is unable to demonstrate elementary-level science skills related to the learning standards and key ideas being assessed.</li> <li>• The student is unable to demonstrate understanding of the science content, concepts, and skills required for an elementary-level academic environment.</li> </ul>

#### **New York State Grade 4 Elementary-Level Science Test June 2011 Written Test Performance Test Form A**

Item maps contained in this appendix:

- Reference to *Elementary-Level Science Core Curriculum Grades K-4* — June 2011 Written Test and Performance Test, Form A
- Reference to Process Skills Based on Standard 4 — June 2011 Written Test and Performance Test, Form A
- Reference to Core Curriculum for Individual Test Questions — June 2011 Written Test
- Reference to Core Curriculum for Individual Test Questions — Performance Test, Form A

**Note:** Core curriculum is based on *NYS Learning Standards for Mathematics, Science, and Technology*.

<i>NYS Learning Standards for Mathematics, Science, and Technology Standard/Area</i>	<b>Reference to <i>Elementary-Level Science Core Curriculum Grades K-4</i> Key Idea or Performance Indicator</b>	<b>Performance Test Form A Question Number</b>			<b>June 2011 Written Test Question Number</b>
		<b>Station 1</b>	<b>Station 2</b>	<b>Station 3</b>	
<b>Standard 1 Mathematical Analysis</b>	<b>M1</b> Abstraction and symbolic representation are used to communicate mathematically.	1, 2, 4, 5		1	1, 32
	<b>M2</b> Deductive and inductive reasoning are used to reach mathematical conclusions.			3, 5	35
	<b>M3</b> Critical thinking skills are used in the solution of mathematical problems.	1, 2, 4	1, 3	1	31, 33
<b>Standard 1 Scientific Inquiry Key Idea 1</b>	<b>S1.1</b> Ask “why” questions in attempts to seek greater understanding concerning objects and events they have observed and heard about.				
	<b>S1.2</b> Question the explanations they hear from others and read about, seeking clarification and comparing them with their own observations and understandings.		4		
	<b>S1.3</b> Develop relationships among observations to construct descriptions of objects and events and to form their own tentative explanations of what they have observed.		2		
<b>Standard 1 Scientific Inquiry Key Idea 2</b>	<b>S2.1</b> Develop written plans for exploring phenomena or for evaluating explanations guided by questions or proposed explanations they have helped formulate.				
	<b>S2.2</b> Share their research plans with others and revise them based on their suggestions.				
	<b>S2.3</b> Carry out their plans for exploring phenomena through direct observation and through the use of simple instruments that permit measurement of quantities such as length, mass, volume, temperature, and time.			1	
<b>Standard 1 Scientific Inquiry Key Idea 3</b>	<b>S3.1</b> Organize observations and measurements of objects and events through classification and the preparation of simple charts and tables.		1, 3		
	<b>S3.2</b> Interpret organized observations and measurements, recognizing simple patterns, sequences, and relationships.		2, 4	2, 3	32
	<b>S3.3</b> Share their findings with others and actively seek their interpretations and ideas.		4		
	<b>S3.4</b> Adjust their explanations and understandings of objects and events based on their findings and new ideas.			4, 5	
<b>Standard 1 Engineering Design</b>	<b>T1.1 -T1.5</b> Engineering design is an iterative process involving modeling and optimization to develop technological solutions to problems within given constraints.			4	

<i>NYS Learning Standards for Mathematics, Science, and Technology Standard/Area</i>	Reference to <i>Elementary-Level Science Core Curriculum Grades K-4</i> Key Idea or Performance Indicator	Performance Test Form A Question Number			June 2011 Written Test Question Number
		Station 1	Station 2	Station 3	
<b>Standard 2 Information Systems</b>	1 Information technology is used to retrieve, process, and communicate information as a tool to enhance learning.				
	2 Knowledge of the impacts and limitations of information systems is essential to its effectiveness and ethical use.				
	3 Information technology can have positive and negative impacts on society, depending upon how it is used.				
<b>Standard 4 Physical Setting</b>	1 Earth and celestial phenomena can be described by principles of relative motion and perspective.				2, 4, 32
	2 Many of the phenomena that we observe on Earth involve interactions among components of air, water, and land.				3, 5, 6
	3 Matter is made up of particles whose properties determine the observable characteristics of matter and its reactivity.	1, 2, 3, 4, 5	1, 2		1, 7, 8, 9, 11, 14, 33, 34, 42
	4 Energy exists in many forms, and when these forms change energy is conserved.		1, 2		5, 10, 12, 14, 34
	5 Energy and matter interact through forces that result in changes in motion.		3, 4	1, 2, 3, 4, 5	6, 13, 35, 36, 37
<b>Standard 4 Living Environment</b>	1 Living things are both similar to and different from each other and from nonliving things.				15, 39
	2 Organisms inherit genetic information in a variety of ways that result in continuity of structure and function between parents and offspring.				16, 17, 18
	3 Individual organisms and species change over time.				19, 20, 23, 38, 40, 41
	4 The continuity of life is sustained through reproduction and development.				19, 20, 21
	5 Organisms maintain a dynamic equilibrium that sustains life.				22, 23, 24
	6 Plants and animals depend on each other and their physical environment.				25, 26, 28, 29, 30
	7 Human decisions and activities have had a profound impact on the physical and living environment.				27

<i>NYS Learning Standards for Mathematics, Science, and Technology Standard/Area</i>	Reference to <i>Elementary-Level Science Core Curriculum Grades K-4</i> Key Idea or Performance Indicator	Performance Test Form A Question Number			June 2011 Written Test Question Number
		Station 1	Station 2	Station 3	
<b>Standard 6 Interconnectedness: Common Themes</b>	<b>1 Systems Thinking</b> Through systems thinking, people can recognize the commonalities that exist among all systems and how parts of a system interrelate and combine to perform specific functions.				
	<b>2 Models</b> Models are simplified representations of objects, structures, or systems used in analysis, explanation, interpretation, or design.				1, 4, 9, 12, 14, 17, 18, 19, 20, 28, 29, 30, 31, 34, 35, 36, 37, 38, 42
	<b>3 Magnitude and Scale</b> The grouping of magnitudes of size, time, frequency, and pressures or other units of measurement into a series of relative order provides a useful way to deal with the immense range and the changes in scale that affect the behavior and design of systems.				
	<b>4 Equilibrium and Stability</b> Equilibrium is a state of stability due either to a lack of change (static equilibrium) or a balance between opposing forces (dynamic equilibrium).				
	<b>5 Patterns of Change</b> Identifying patterns of change is necessary for making predictions about future behavior and conditions.			2, 3	
	<b>6 Optimization</b> In order to arrive at the best solution that meets criteria within constraints, it is often necessary to make trade-offs.			5	
<b>Standard 7 Interdisciplinary Problem Solving</b>	<b>1 Connections</b> The knowledge and skills of mathematics, science, and technology are used together to make informed decisions and solve problems, especially those related to issues of science/technology/society, consumer decision-making, design, and inquiry into phenomena.				
	<b>2 Strategies</b> Solving interdisciplinary problems involves a variety of skills and strategies, including effective work habits; gathering and processing information; generating and analyzing ideas; realizing ideas; making connections among the common themes of mathematics, science, and technology; and presenting results.
