

FOR TEACHERS ONLY

The University of the State of New York

REGENTS HIGH SCHOOL EXAMINATION

ALGEBRA 2/TRIGONOMETRY

Wednesday, January 23, 2013 — 1:15 to 4:15 p.m., only

SCORING KEY AND RATING GUIDE

Mechanics of Rating

The following procedures are to be followed for scoring student answer papers for the Regents Examination in Algebra 2/Trigonometry. More detailed information about scoring is provided in the publication *Information Booklet for Scoring the Regents Examinations in Mathematics*.

Do *not* attempt to correct the student's work by making insertions or changes of any kind. In scoring the open-ended questions, use check marks to indicate student errors. Unless otherwise specified, mathematically correct variations in the answers will be allowed. Units need not be given when the wording of the questions allows such omissions.

Each student's answer paper is to be scored by a minimum of three mathematics teachers. No one teacher is to score more than approximately one-third of the open-ended questions on a student's paper. On the student's separate answer sheet, for each question, record the number of credits earned and the teacher's assigned rater/scorer letter.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Raters should record the student's scores for all questions and the total raw score on the student's separate answer sheet. Then the student's total raw score should be converted to a scale score by using the conversion chart that will be posted on the Department's web site at: <http://www.p12.nysed.gov/assessment/> on Wednesday, January 23, 2013. Because scale scores corresponding to raw scores in the conversion chart may change from one administration to another, it is crucial that, for each administration, the conversion chart provided for that administration be used to determine the student's final score. The student's scale score should be entered in the box provided on the student's separate answer sheet. The scale score is the student's final examination score.

If the student’s responses for the multiple-choice questions are being hand scored prior to being scanned, the scorer must be careful not to make any marks on the answer sheet except to record the scores in the designated score boxes. Marks elsewhere on the answer sheet will interfere with the accuracy of the scanning.

Part I

Allow a total of 54 credits, 2 credits for each of the following.

(1) 2	(8) 3	(15) 2	(22) 3
(2) 3	(9) 4	(16) 3	(23) 4
(3) 2	(10) 1	(17) 3	(24) 1
(4) 3	(11) 4	(18) 1	(25) 3
(5) 3	(12) 4	(19) 3	(26) 2
(6) 1	(13) 1	(20) 1	(27) 4
(7) 2	(14) 1	(21) 1	

Updated information regarding the rating of this examination may be posted on the New York State Education Department’s web site during the rating period. Check this web site at: <http://www.p12.nysed.gov/assessment/> and select the link “Scoring Information” for any recently posted information regarding this examination. This site should be checked before the rating process for this examination begins and several times throughout the Regents Examination period.

General Rules for Applying Mathematics Rubrics

I. General Principles for Rating

The rubrics for the constructed-response questions on the Regents Examination in Algebra 2/Trigonometry are designed to provide a systematic, consistent method for awarding credit. The rubrics are not to be considered all-inclusive; it is impossible to anticipate all the different methods that students might use to solve a given problem. Each response must be rated carefully using the teacher's professional judgment and knowledge of mathematics; all calculations must be checked. The specific rubrics for each question must be applied consistently to all responses. In cases that are not specifically addressed in the rubrics, raters must follow the general rating guidelines in the publication *Information Booklet for Scoring the Regents Examinations in Mathematics*, use their own professional judgment, confer with other mathematics teachers, and/or contact the State Education Department for guidance. During each Regents Examination administration period, rating questions may be referred directly to the Education Department. The contact numbers are sent to all schools before each administration period.

II. Full-Credit Responses

A full-credit response provides a complete and correct answer to all parts of the question. Sufficient work is shown to enable the rater to determine how the student arrived at the correct answer.

When the rubric for the full-credit response includes one or more examples of an acceptable method for solving the question (usually introduced by the phrase “such as”), it does not mean that there are no additional acceptable methods of arriving at the correct answer. Unless otherwise specified, mathematically correct alternative solutions should be awarded credit. The only exceptions are those questions that specify the type of solution that must be used; e.g., an algebraic solution or a graphic solution. A correct solution using a method other than the one specified is awarded half the credit of a correct solution using the specified method.

III. Appropriate Work

Full-Credit Responses: The directions in the examination booklet for all the constructed-response questions state: “Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc.” The student has the responsibility of providing the correct answer *and* showing how that answer was obtained. The student must “construct” the response; the teacher should not have to search through a group of seemingly random calculations scribbled on the student paper to ascertain what method the student may have used.

Responses With Errors: Rubrics that state “Appropriate work is shown, but ...” are intended to be used with solutions that show an essentially complete response to the question but contain certain types of errors, whether computational, rounding, graphing, or conceptual. If the response is incomplete; i.e., an equation is written but not solved or an equation is solved but not all of the parts of the question are answered, appropriate work has *not* been shown. Other rubrics address incomplete responses.

IV. Multiple Errors

Computational Errors, Graphing Errors, and Rounding Errors: Each of these types of errors results in a 1-credit deduction. Any combination of two of these types of errors results in a 2-credit deduction. No more than 2 credits should be deducted for such mechanical errors in any response. The teacher must carefully review the student's work to determine what errors were made and what type of errors they were.

Conceptual Errors: A conceptual error involves a more serious lack of knowledge or procedure. Examples of conceptual errors include using the incorrect formula for the area of a figure, choosing the incorrect trigonometric function, or multiplying the exponents instead of adding them when multiplying terms with exponents. A response with one conceptual error can receive no more than half credit.

If a response shows repeated occurrences of the same conceptual error, the student should not be penalized twice. If the same conceptual error is repeated in responses to other questions, credit should be deducted in each response.

If a response shows two (or more) different major conceptual errors, it should be considered completely incorrect and receive no credit.

If a response shows one conceptual error and one computational, graphing, or rounding error, the teacher must award credit that takes into account both errors; i.e., awarding half credit for the conceptual error and deducting 1 credit for each mechanical error (maximum of two deductions for mechanical errors).

Part II

For each question, use the specific criteria to award a maximum of 2 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(28) [2] 1810, and appropriate work is shown.

[1] Appropriate work is shown, but one computational error is made, but an appropriate sum is stated.

or

[1] Appropriate work is shown, but one conceptual error is made, but an appropriate sum is stated.

or

[1] Appropriate work is shown to find 176, but no further correct work is shown.

or

[1] 1810, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct answer that was obtained by an obviously incorrect procedure.

(29) [2] Sum = $\frac{11}{3}$ and product = 2, and appropriate work is shown.

[1] Appropriate work is shown, but one computational error is made, but an appropriate sum and product are stated.

or

[1] Appropriate work is shown, but one conceptual error is made, but an appropriate sum and product are stated.

or

[1] Appropriate work is shown to find the correct roots, $x = \frac{2}{3}$ and $x = 3$, but no further correct work is shown.

or

[1] Appropriate work is shown to find $\frac{11}{3}$ and 2, but the answers are not labeled or are labeled incorrectly.

or

[1] Appropriate work is shown to find sum = $\frac{11}{3}$ or product = 2.

or

[1] Sum = $\frac{11}{3}$ and product = 2, but no work is shown.

[0] $\frac{11}{3}$ and 2, but the answers are not labeled or are labeled incorrectly, and no work is shown.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

- (30) [2] 25, and appropriate work is shown.
- [1] Appropriate work is shown, but one computational error is made, but an appropriate value is stated.
- or*
- [1] Appropriate work is shown, but one conceptual error is made, but an appropriate value is stated.
- or*
- [1] 25, but no work is shown.
- [0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
- (31) [2] 7, and appropriate work is shown.
- [1] Appropriate work is shown, but one computational error is made, but an appropriate interquartile range is stated.
- or*
- [1] Appropriate work is shown, but one conceptual error is made, but an appropriate interquartile range is stated.
- or*
- [1] The interval 72–79 is stated, but no further correct work is shown.
- or*
- [1] $Q_1 = 72$ and $Q_3 = 79$ are stated, but no further correct work is shown.
- or*
- [1] 7, but no work is shown.
- [0] 72 and 79 are stated, but no further correct work is shown.
- or*
- [0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(32) [2] $\frac{1 \pm \sqrt{19}}{6}$, and appropriate work is shown.

[1] Appropriate work is shown, but one computational or simplification error is made, but appropriate solutions are stated.

or

[1] Appropriate work is shown, but one conceptual error is made, but appropriate solutions are stated.

or

[1] Appropriate work is shown, but the solutions are stated as decimals.

or

[1] $\frac{1 \pm \sqrt{19}}{6}$, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(33) [2] 2.14, and appropriate work is shown.

[1] Appropriate work is shown, but one computational or rounding error is made, but an appropriate number of hours is stated.

or

[1] Appropriate work is shown, but one conceptual error is made, but an appropriate number of hours is stated.

or

[1] $3t = \ln 614$ or $t = \frac{\ln 614}{3}$ is stated, but no further correct work is shown.

or

[1] 2.14, but no work is shown.

[0] $614 = e^{3t}$, but no further correct work is shown.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

- (34) [2] " $x \leq -2$ or $x \geq 5$ " or an equivalent answer, and appropriate work is shown.
- [1] Appropriate work is shown, but one computational or graphing error is made, but an appropriate solution is stated.
- or**
- [1] Appropriate work is shown, but one conceptual error is made, but an appropriate solution is stated.
- or**
- [1] Appropriate work is shown, but the solution is not expressed as a disjunction.
- or**
- [1] " $x \leq -2$ or $x \geq 5$," but no work is shown.
- [0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
- (35) [2] $171^{\circ}53'$
- [1] One computational or rounding error is made, but an appropriate answer is stated.
- or**
- [1] One conceptual error is made, but an appropriate answer is stated.
- or**
- [1] Appropriate work is shown, but the answer is expressed as a decimal.
- [0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
-

Part III

For each question, use the specific criteria to award a maximum of 4 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

- (36) [4] 4 and 5, and appropriate algebraic work is shown.
- [3] Appropriate work is shown, but one computational or factoring error is made, but appropriate values are stated.
- [2] Appropriate work is shown, but two or more computational or factoring errors are made, but appropriate values are stated.
- or*
- [2] Appropriate work is shown, but one conceptual error is made, but appropriate values are stated.
- or*
- [2] $x^2 - 9x + 20 = 0$ is written, but no further correct work is shown.
- or*
- [2] 4 and 5, but a method other than algebraic is used.
- [1] Appropriate work is shown, but one conceptual error and one computational or factoring error are made, but appropriate values are stated.
- or*
- [1] $(x + 4)^2 = 17x - 4$ is written, but no further correct work is shown.
- or*
- [1] 4 and 5, but no work is shown.
- [0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

- (37) [4] $y = 215.983(1.652)^x$ and 7250, and appropriate work is shown.
- [3] Appropriate work is shown, but one computational or rounding error is made, but an appropriate number of bacteria is stated.
- or**
- [3] The expression $215.983(1.652)^x$ is written and 7250, and appropriate work is shown.
- or**
- [3] $y = 215.983(1.652)^x$ and 7250, but no work is shown.
- [2] Appropriate work is shown, but two or more computational or rounding errors are made, but an appropriate number of bacteria is stated.
- or**
- [2] Appropriate work is shown, but one conceptual error is made, but an appropriate number of bacteria is stated.
- or**
- [2] The expression $215.983(1.652)^x$ is written and 7250, but no work is shown.
- or**
- [2] $y = 215.983(1.652)^x$, but no further correct work is shown.
- or**
- [2] An incorrect exponential regression equation is solved appropriately for the number of bacteria.
- [1] Appropriate work is shown, but one conceptual error and one computational or rounding error are made, but an appropriate number of bacteria is stated.
- or**
- [1] The expression $215.983(1.652)^x$ is written, but no further correct work is shown.
- or**
- [1] 7250, but no work is shown.
- [0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

- (38) [4] 182.3 and 128.7, and appropriate work is shown.
- [3] Appropriate work is shown, but one computational or rounding error is made, but appropriate distances are found.
- or**
- [3] Appropriate work is shown to find either 182.3 or 128.7, but no further correct work is shown.
- [2] Appropriate work is shown, but two or more computational or rounding errors are made, but appropriate distances are found.
- or**
- [2] Appropriate work is shown, but one conceptual error is made, but appropriate distances are found.
- or**
- [2] $m\angle FAB = 43$ and $m\angle AFB = 32$ are found, and a correct substitution is made into the Law of Sines, but no further correct work is shown.
- [1] Appropriate work is shown, but one conceptual error and one computational or rounding error are made, but appropriate distances are found.
- or**
- [1] $m\angle FAB = 43$ and $m\angle AFB = 32$ are found, but no further correct work is shown.
- or**
- [1] 182.3 and 128.7, but no work is shown.
- [0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
-

Part IV

For this question, use the specific criteria to award a maximum of 6 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(39) [6] $\frac{2}{3}$ or an equivalent answer, and appropriate algebraic work is shown.

[5] Appropriate work is shown, but one computational or factoring error is made, but an appropriate solution is stated.

or

[5] Appropriate work is shown to find $\frac{2}{3}$ and 1, but the extraneous solution is not rejected.

[4] Appropriate work is shown, but two computational or factoring errors are made, but an appropriate solution is stated.

or

[4] $(3x - 2)(x - 1) = 0$ is written, but no further correct work is shown.

[3] Appropriate work is shown, but three or more computational or factoring errors are made, but an appropriate solution is stated.

or

[3] Appropriate work is shown, but one conceptual error is made, but an appropriate solution is stated.

or

[3] A quadratic equation in standard form (set equal to zero) is written correctly, but no further correct work is shown.

or

[3] $\frac{2}{3}$, but a method other than algebraic is used.

[2] Appropriate work is shown, but one conceptual error and one computational or factoring error are made, but an appropriate solution is stated.

or

[2] $x^2 + x - 1 = 16x^2 - 24x + 9$ is written, but no further correct work is shown.

[1] Appropriate work is shown, but one conceptual error and two or more computational or factoring errors are made, but an appropriate solution is stated.

or

[1] $\frac{2}{3}$, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

Regents Examination in Algebra 2/Trigonometry

January 2013

Chart for Converting Total Test Raw Scores to Final Examination Scores (Scale Scores)

The Chart for Determining the Final Examination Score for the January 2013 Regents Examination in Algebra 2/Trigonometry will be posted on the Department's web site at: <http://www.p12.nysed.gov/assessment/> on Wednesday, January 23, 2013. Conversion charts provided for previous administrations of the Regents Examination in Algebra 2/Trigonometry must NOT be used to determine students' final scores for this administration.

Online Submission of Teacher Evaluations of the Test to the Department

Suggestions and feedback from teachers provide an important contribution to the test development process. The Department provides an online evaluation form for State assessments. It contains spaces for teachers to respond to several specific questions and to make suggestions. Instructions for completing the evaluation form are as follows:

1. Go to <http://www.forms2.nysed.gov/emsc/osa/exameval/reexameval.cfm>.
2. Select the test title.
3. Complete the required demographic fields.
4. Complete each evaluation question and provide comments in the space provided.
5. Click the SUBMIT button at the bottom of the page to submit the completed form.
