New York State Testing Program

English Language Arts Book 3

Grade 4

January 9–13, 2006

Name ____________________
This test asks you to write about what you have listened to or read. Your writing will NOT be scored on your personal opinions. It WILL be scored on:

• how clearly you organize and express your ideas
• how accurately and completely you answer the questions
• how well you support your ideas with examples
• how interesting and enjoyable your writing is
• how correctly you use grammar, spelling, punctuation, and paragraphs

Whenever you see this symbol, be sure to plan and check your writing.

Directions
In this part of the test, you are going to read a story called “The Stolen Moon” and an article called “The Sun and the Moon.” You will answer questions 32 through 35 and write about what you have read. You may look back at the story and the article as often as you like.
No one knew how Bear had come to possess the moon. All the other animals knew was that the moon—the round, familiar moon—was no longer in the sky. There were many who wanted the moonlight, but they could not persuade Bear to give up the moon. They did not know that Bear had tied up the moon in a bag and hidden it under his bed. They only knew that Bear preferred the darkness.

Fox wanted the moon. He wanted the moon to make moonlight, so he could hunt by its light. He went to Raven, who was Bear’s uncle, and asked for his help. Raven also wanted moonlight, and so together they made a plan and hurried off to Bear’s camp.

Bear made them welcome, and after they were comfortably seated, Raven began telling stories. This was part of their secret plan. It wasn’t long before Bear grew drowsy. Raven told one monotonous story after another, and Bear grew more and more sleepy. But every time he nodded off, he quickly awoke with a start, for something told him he must not fall asleep.

While Raven was telling stories, Fox was peering around the room in search of the hidden moon. Just as Bear was nodding off for the very last time, Fox spotted the tied-up bag under Bear’s bed. It was evening and the glow of the moon had begun to light up the cloth pouch. Fox ran and grabbed the bag by its strings, carried it outdoors, and hurled the moon into the sky.

Bear came awake at that very moment, and pushing open the window, he cried, “Come back, moon, come back. I don’t want you to shine.”
But Fox shouted even louder, “Fly away, moon, fly away, and give us your light.”

Some say they were both successful, while others say they both failed. For some evenings are filled with moonlight, and on other evenings there is no moon at all.
Fox and Raven make a plan to get the moon back. Complete the chart below to show how the plan is carried out.

<table>
<thead>
<tr>
<th>Point of Story</th>
<th>Fox and Raven’s Plan</th>
</tr>

| End of story | Finally,  
|               |  
|               |  
|               |  

Think about whether Bear and Fox get what they want in the story “The Stolen Moon.” Now choose one of the characters:

Bear

Fox

Explain how the character you chose does or does not get what he wants. Use details from the story to support your answer.
The Sun and the Moon

by Leo Elze

The sun lights Earth’s sky during the day. Earth’s moon appears to light our sky at night. But the sun and moon are more than just big lamps!

Unlike Earth, the sun is not a planet. It is a star. The sun is made up of hot gases. The burning gases give heat and light. The moon is mostly rock and lava. Even though it seems to give light to Earth, the moon does not make light. Instead, the moon gets light from the sun. When we see a bright moon in a dark sky, we see the side of the moon that receives light from the sun.

The sun and the moon might appear to be the same size. But the sun is much bigger. Let’s put it another way: the sun is more than 100 times the size of Earth. The sun is 400 times the size of Earth’s moon.

The moon might seem larger because it is so close to Earth. A trip to the moon is still a big trip, though. The moon is 238,000 miles away! People have made many trips to the moon. No one has ever visited the sun. One reason is that the sun is too far away. It is over 93 million miles from Earth. No rocket could carry enough fuel to go all the way to the sun. Another reason is that the sun is far too hot. The outside of the sun is thousands of times hotter than the hottest oven. Inside the sun is even hotter. Even if a rocket could fly all the way to the sun, it would burn up long before it arrived.

How big are they?
The sun is 2,712,000 miles around.
Earth is 24,900 miles around.
The moon is 6,790 miles around.

The moon is 6,790 miles around.

The Sun

The Moon
The sun and the moon are both in the sky, but they are very different from each other. Give two ways that the sun is different from the moon. Use details from the article in your answer.

Planning Page

You may PLAN your writing for question 35 here if you wish, but do NOT write your final answer on this page. Your writing on this Planning Page will NOT count toward your final score. Write your final answer on Pages 9 and 10.
In the story “The Stolen Moon,” Bear and Fox want the moon for different reasons. Explain what each character wants and why. How does information from “The Sun and the Moon” show that it is impossible for each character to have what he wants? Use details from both the story and the article to support your answer.

In your answer, be sure to include

• what Bear wanted and why
• what Fox wanted and why
• why it is impossible for Bear and Fox to each have what they want
• details from both the story and the article to support your answer

Check your writing for correct spelling, grammar, capitalization, and punctuation.
