(4)

---

**Score 1:** The student stated 4, but did not show work.

---

**Question 28**

---

**28** Determine the common difference of the arithmetic sequence in which  $a_1 = 3$  and  $a_4 = 15$ .

$$\begin{aligned}a_n &= 3 + (15-1)(d) \\&= 17\end{aligned}$$

---

**Score 0:** The student did not show enough correct work to receive any credit.

---

**Question 29**

---

29 Given:  $A = \sqrt{363}$  and  $B = \sqrt{27}$

Explain why  $A + B$  is irrational.

$A + B$  is irrational because  $\sqrt{363} \approx 19.052558\dots$   
and  $\sqrt{27} \approx 5.1961524\dots$  an irrational number added  
to an irrational number will always be irrational.  
Both terms neither terminate, nor repeat.

Explain why  $A \cdot B$  is rational.

$AB$  is rational because  $\sqrt{363} \cdot \sqrt{27} = 99$ , which  
is a whole number; all whole numbers are  
rational numbers

---

**Score 2:** The student gave a complete and correct response.

---

**Question 29**

---

29 Given:  $A = \sqrt{363}$  and  $B = \sqrt{27}$

Explain why  $A + B$  is irrational.

because irrational + irrational =  
irrational

Explain why  $A \cdot B$  is rational. When you multiply  $\sqrt{363} \times \sqrt{27}$ , you  
get 99 which is a rational number

---

**Score 2:** The student gave a complete and correct response.

---

**Question 29**

---

29 Given:  $A = \sqrt{363}$  and  $B = \sqrt{27}$

Explain why  $A + B$  is irrational.

The sum is a non-repeating and non-terminating decimal.

Explain why  $A \cdot B$  is rational.

**Score 1:** The student gave only one correct explanation.

**Question 29**

29 Given:  $A = \sqrt{363}$  and  $B = \sqrt{27}$

Explain why  $A + B$  is irrational.

$A + B$  is irrational because when you add them it doesn't give you a whole number it gives you a decimal.

Explain why  $A \cdot B$  is rational.

$$\sqrt{363} \sqrt{27} = 99$$

$AB$  is rational because if you solve  $AB$  it gives you a whole number.

**Score 1:** The student gave a correct explanation for  $A \cdot B$  and an incomplete explanation for  $A + B$ .

**Question 29**

29 Given:  $A = \sqrt{363}$  and  $B = \sqrt{27}$

Explain why  $A + B$  is irrational.

It's not rational because square roots  
aren't rational.

Explain why  $A \cdot B$  is rational.

$AB$  is rational because the answer  
is a decimal. And decimals are rational.

**Score 0:** The student did not write correct explanations.

---

**Question 30**

---

30 Use the quadratic formula to solve  $x^2 - 4x + 1 = 0$  for  $x$ .

Round the solutions to the *nearest hundredth*.

### Question 34

34 The table below shows the number of math classes missed during a school year for nine students, and their final exam scores.

Number of Classes Missed (x)	2	10	3	22	15	2	20	18	9
Final Exam Score (y)	99	72	90	35	60	80	40	43	75

$$y = mx + b$$

Write the linear regression equation for this data set. Round all values to the *nearest hundredth*.

$$y = -2.81x + 97.56$$

State the correlation coefficient for your linear regression. Round your answer to the *nearest hundredth*.

$$\text{correlation} = \text{coefficient} =$$

;94

State what the correlation coefficient indicates about the linear fit of the data.

That around .94 is the number that is added for each ~~class~~ has a miss.

**Score 1:** The student made a rounding error in the regression equation, and no further correct work was shown.

### Question 34

34 The table below shows the number of math classes missed during a school year for nine students, and their final exam scores.

<b>Number of Classes Missed (x)</b>	2	10	3	22	15	2	20	18	9
<b>Final Exam Score (y)</b>	99	72	90	35	60	80	40	43	75

Write the linear regression equation for this data set. Round all values to the *nearest hundredth*.

- .91

State what the correlation coefficient indicates about the linear fit of the data.

Strong

**Score 1:** The student wrote an appropriate indication based an incorrect correlation coefficient.

### Question 34

- 34 The table below shows the number of math classes missed during a school year for nine students, and their final exam scores.

Number of Classes Missed (x)	2	10	3	22	15	2	20	18	9
Final Exam Score (y)	99	72	90	35	60	80	40	43	75

Write the linear regression equation for this data set. Round all values to the *nearest hundredth*.

$$\Delta y = \frac{(99) - (72)}{(2) - (10)} = \frac{27}{-8} = -3.375 \rightarrow -3.38x$$
$$y = mx + b$$
$$72 = (10)(-3.38) + b$$
$$72 = -33.8 + b \rightarrow 35.2 = b$$
$$\boxed{y = -3.38x + 35.2}$$

State the correlation coefficient for your linear regression. Round your answer to the *nearest hundredth*.

3.38

State what the correlation coefficient indicates about the linear fit of the data.

The correlation coefficient indicates the amount that the final exam score decreases for each number of classes missed.

**Score 0:** The student did not show enough correct work to receive any credit.

**Question 35**

---

- 35 A fence was installed around the edge of a rectangular garden. The length,  $l$ , of the fence was 5 feet less than 3 times its width,  $w$ . The amount of fencing used was 90 feet.

Write a system of equations or write an equation using one variable that models this situation.

$$2w + 2(3w - 5) = 90$$

Determine algebraically the dimensions, in feet, of the garden.

$$\begin{aligned} 2w + 2(3w - 5) &= 90 & \text{length} &= 3(12.5) - 5 \\ 2w + 6w - 10 &= 90 & (1) &= 32.5 \\ +10 &+10 & \\ \hline 8w &= 100 \\ \hline 8 & 8 \\ w &= 12.5 \end{aligned}$$

---

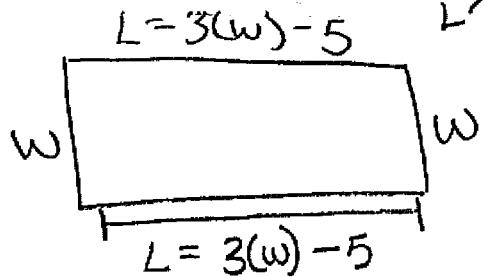

**Score 4:** The student gave a complete and correct response.

**Question 35**

- 35 A fence was installed around the edge of a rectangular garden. The length,  $l$ , of the fence was 5 feet less than 3 times its width,  $w$ . The amount of fencing used was 90 feet.

Write a system of equations or write an equation using one variable that models this situation.

$$3(w) - 5 + 3(w) - 5 + 2w = 90 \text{ ft.}$$

Determine algebraically the dimensions, in feet, of the garden.

$$\boxed{3w} \cancel{- 5} + \boxed{3w} \cancel{- 5} + \boxed{2w} = 90 \text{ ft.}$$

$$\begin{array}{r} 8w - 10 = 90 \\ +10 \hline 8w = 100 \end{array}$$

$$\boxed{w = 12.5 \text{ ft.}}$$

$$L = 3(12.5) - 5$$

$$\boxed{L = 32.5 \text{ ft.}}$$

**Score 4:** The student gave a complete and correct response.

### Question 35

- 35 A fence was installed around the edge of a rectangular garden. The length,  $l$ , of the fence was 5 feet less than 3 times its width,  $w$ . The amount of fencing used was 90 feet.

Write a system of equations or write an equation using one variable that models this situation.

Determine algebraically the dimensions, in feet, of the garden.

$$2(3w - 5) + 2w = 90 \quad \text{width} \approx 12.5 \text{ feet}$$
$$\text{length} \approx 32.5 \text{ feet}$$

$$6w - 10 + 2w = 90$$

$$\begin{array}{r} 6w - 10 = 90 \\ +10 \quad +10 \\ \hline 6w = 100 \\ \hline w = 12.5 \end{array}$$

$$3(12.5) - 5 = 32.5$$

**Score 4:** The student gave a complete and correct response.

### Question 35

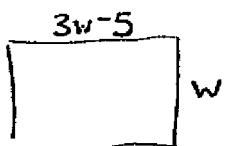

- 35 A fence was installed around the edge of a rectangular garden. The length,  $l$ , of the fence was 5 feet less than 3 times its width,  $w$ . The amount of fencing used was 90 feet.

Write a system of equations or write an equation using one variable that models this situation.

$$l = 3w - 5$$

$$90 = l + w$$

Determine algebraically the dimensions, in feet, of the garden.

$$90 = (3w - 5) + w$$

$$90 = 4w - 5$$

$$\frac{95}{4} = \frac{4w}{4}$$

$$23.75 = w$$

width = 23.75 feet  
length = 66.25 feet

**Score 3:** The student wrote only one equation in the system correctly, but solved the system appropriately.

### Question 35
