

fraction  $1/b$  as the quantity formed by 1 part when a whole is partitioned...”), and then in 3.NF.2 begin to apply their knowledge in a number line context (“Understand a fraction as a number on the number line...”). Both 3.NF.1 and 3.NF.2 help build students’ conceptual understanding in order to apply their knowledge to understand and explain equivalent fractions by “comparing fractions by reasoning about their size,” as 3.NF.3 requires.

An emphasis on the most critical clusters and standards allows depth and focus in learning, which is carried out through the Standards for Mathematical Practice. Without such depth and focus, attention to the Standards for Mathematical Practice would be unrealistic.

**For more information about the Content Emphases, please refer to**  
<http://engageny.org/resource/math-content-emphases/>.

## Sequencing

The August 2012 memorandum *Grades 3–8 Mathematics Testing Program Guidance: September-to-April/May-to-June Common Core Learning Standards* provides guidance on aligning standards to each time period. Standards designated as September-to-April will be assessed on the 2014 Grade 3 Common Core Mathematics Test. Several standards designated as Major Clusters are included in the May-to-June instructional period. Placing these standards in the May-to-June instructional period provides more coherent September-to-April content blocks and allows for more logical sequencing for standards that closely relate to the Major Clusters of the following year.

One of the ways the CCLS are changing instructional practices and our assessment design is through the spiraling of mathematic concepts within and across grade levels. This means that when a student has mastered a particular standard, that student has also inherently mastered the related standards that came before. It is our recommendation, therefore, that all teachers pay close attention to student mastery of May-to-June standards so that student learning can begin promptly and efficiently the following year.

**For more information about the *Grades 3–8 Mathematics Testing Program Guidance: September-to-April/May-to-June Common Core Learning Standards*, please refer to**  
<http://www.p12.nysed.gov/assessment/ei/2014/math-sept-april-may-june.pdf>.

## Emphases and Sequencing

The chart on page 5 illustrates the different *clusters* and *standards* recommended for instructional emphasis. *Standards* that are recommended for greater emphasis are indicated with a check mark while those that are recommended for instruction after the administration of the 2014 Grade 3 Common Core Mathematics Test are indicated by the word “Post.” ***The instructional emphasis recommended in this chart is mirrored in the Grade 3 test design, whereby clusters and standards that are recommended for greater emphasis will be assessed in greater number. Standards recommended for greater emphasis that are designated for instruction after the administration of the 2014 Grade 3 Common Core Mathematics Test, while not tested, will be fundamental in ensuring that students are prepared for Grade 4 instruction.***

Cluster Emphasis	Domain	Cluster	Standard
Major Clusters	Operations and Algebraic Thinking	<i>Represent and solve problems involving multiplication and division.</i>	3.OA.1
			3.OA.2
			3.OA.3 ✓
			3.OA.4
		<i>Understand the properties of multiplication and the relationship between multiplication and division.</i>	3.OA.5
			3.OA.6
			3.OA.7
	<i>Multiply and divide within 100.</i>	3.OA.8 ✓	
		3.OA.9	
	Number and Operations – Fractions	<i>Develop understanding of fractions as numbers.</i>	3.NF.1
			3.NF.2
			3.NF.3 ✓
	Measurement and Data	<i>Solve problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects.</i>	3.MD.1
			3.MD.2
<i>Geometric measurement: understand concepts of area and relate area to multiplication and to addition.</i>		3.MD.5	
		3.MD.6	
		3.MD.7 ✓	
Supporting Clusters	Measurement and Data	<i>Represent and interpret data.</i>	3.MD.3
			3.MD.4 <i>Post</i>
	Geometry	<i>Reason with shapes and their attributes.</i>	3.G.1 <i>Post</i>
			3.G.2
Additional Clusters	Number and Operations in Base Ten	<i>Use place value understanding and properties of operations to perform multi-digit arithmetic.</i>	3.NBT.1
			3.NBT.2
			3.NBT.3
	Measurement and Data	<i>Geometric measurement: recognize perimeter as an attribute of plane figures and distinguish between linear and area measures.</i>	3.MD.8 <i>Post</i>

✓ = Standards recommended for greater emphasis  
*Post* = Standards recommended for instruction in May-June

# The 2014 Grade 3 Common Core Mathematics Test

---

## Testing Sessions and Times

The 2014 Grade 3 Common Core Mathematics Test will consist of **three books** that are administered over **three successive days**, with one book per day. The 2014 Grade 3 Common Core Mathematics Test is designed so that most students will complete Book 1 and Book 2 in approximately 40 minutes each and Book 3 in about 50 minutes. While it is likely that most students will complete each book sooner, students are permitted 60 minutes to complete Book 1, 60 minutes to complete Book 2, and 70 minutes to complete Book 3. This design provides ample time for students who work at different paces. For more information regarding what students may do once they have completed their work, please refer to the section “When Students Have Completed Their Tests.”

**Grade 3 Estimated Time on Task**

<b>Book</b>	<b>Day Administered</b>	<b>Estimated Time on Task</b>
1	1	40*
2	2	40*
3	3	50**
Total Estimated Time		130

\* Day 1 and Day 2 will be scheduled to allow 60 minutes for completion.

\*\* Day 3 will be scheduled to allow 70 minutes for completion.

The tests must be administered under standard conditions and the directions must be followed carefully. The same test administration procedures must be used with all students so that valid inferences can be drawn from the test results.

NYSED devotes great attention to the security and integrity of the NYSTP. School administrators and teachers involved in the administration of State Assessments are responsible for understanding and adhering to the instructions set forth in the *School Administrator’s Manual* and the *Teacher’s Directions*. These resources will be posted at

<http://www.p12.nysed.gov/assessment/ei/eigen.html>.

## When Students Have Completed Their Tests

Students who finish their assessment before the allotted time expires should be encouraged to go back and check their work. Once the student checks his or her work, or chooses not to, examination materials should be collected by the proctor. After a student's assessment materials are collected, that student may be permitted to read silently.\* This privilege is granted at the discretion of each school. No talking is permitted and no other schoolwork is permitted.

\*For more detailed information about testing administration, including proper procedures for talking to students during testing and handling reading materials, please refer to the *School Administrator's Manual* and the *Teacher's Directions*.

## Test Design

In Grade 3, students are required to apply mathematical understandings and mathematical practices gained in the classroom in order to answer three types of questions: multiple-choice, short-response, and extended-response. Book 1 and Book 2 will consist of multiple-choice questions. Book 3 consists of short- and extended-response questions.

The chart below provides a description of the 2014 Grade 3 Test Design. Please note that the number of multiple-choice questions in Book 1 and in Book 2 includes embedded field test questions. It will not be apparent to students whether a question is an embedded field test question that does not count towards their score or an operational test question that does count towards their score.

**Grade 3 Test Design**

<b>Book</b>	<b>Number of Multiple-Choice Questions</b>	<b>Number of Short-Response Questions</b>	<b>Number of Extended-Response Questions</b>	<b>Total Number of Questions</b>
1	24	0	0	24
2	24	0	0	24
3	0	5	3	8
<b>Total</b>	48	5	3	56

## 2014 Grade 3 Common Core Mathematics Test Blueprint

All questions on the 2014 Grade 3 Common Core Mathematics Test measure the CCLS for Mathematics. The test was designed around the Content Emphases (page 3). As such, questions that assess the Major Clusters make up the majority of the test. Additionally, standards recommended for more emphasis within clusters (page 5) are assessed with greater frequency.

While all questions are linked to a primary standard, many questions measure more than one standard and one or more of the Standards for Mathematical Practices. Similarly, some questions measure cluster-level understandings. As a result of the alignment to standards, clusters, and Standards for Mathematical Practice, the tests assess students' conceptual understanding, procedural fluency, and problem-solving abilities, rather than assessing their knowledge of isolated skills and facts.

The tables below illustrate the domain-level and cluster-level test blueprint. For more information on which clusters and standards to emphasize in instruction, please refer to page 5.

<b>Domain-Level Test Blueprint—Percent of Test Points on Grade 3 Test</b>				
<b>Number and Operations in Base Tens</b>	<b>Number and Operations-Fractions</b>	<b>Operations and Algebraic Thinking</b>	<b>Measurement and Data</b>	<b>Geometry</b>
<b>5–15%</b>	<b>15–25%</b>	<b>40–50%</b>	<b>15–25%</b>	<b>5–15%</b>

<b>Cluster-Emphasis Test Blueprint—Percent of Test Points on Grade 3 Test</b>		
<b>Major Clusters</b>	<b>Supporting Clusters</b>	<b>Additional Clusters</b>
<b>70–80%</b>	<b>10–20%</b>	<b>5–10%</b>

## Question Formats

The 2014 Grade 3 Common Core Mathematics Test contains multiple-choice, short-response (2-point), and extended-response (3-point) questions. For multiple-choice questions, students select the correct response from four answer choices. For short- and extended-response questions, students write an answer to an open-ended question and may be required to show their work. In some cases, they may be required to explain, in words, how they arrived at their answers. Most test questions target more than one standard. Some questions assess an entire cluster. As such, many individual test questions assess Grade 3 September-to-April standards in conjunction with standards from past grades.

### Multiple-Choice Questions

Multiple-choice questions are designed to assess CCLS for Mathematics. Mathematics multiple-choice questions will mainly be used to assess standard algorithms and conceptual standards. Multiple-choice questions incorporate both Standards and Standards for Mathematical Practices, some in real-world applications. Many multiple-choice questions require students to complete multiple steps. Likewise, many of these questions are linked to more than one standard, drawing on the simultaneous application of multiple skills and concepts. Within answer choices, distractors<sup>3</sup> will all be based on plausible missteps.

### Short-Response Questions

Short-response questions are similar to past 2-point questions, requiring students to complete a task and show their work. Like multiple-choice questions, short-response questions will often require multiple steps, the application of multiple mathematics skills, and real-world applications. Many of the short-response questions will cover conceptual and application standards.

### Extended-Response Questions

Extended-response questions are similar to past 3-point questions, asking students to show their work in completing two or more tasks or a more extensive problem. Extended-response questions allow students to show their understanding of mathematical procedures, conceptual understanding, and application. Extended-response questions may also assess student reasoning and the ability to critique the arguments of others.

## Additional Assessment Resources

**Sample Questions for the Grade 3 Common Core Mathematics Tests are available at**

<http://www.engageny.org/resource/new-york-state-common-core-sample-questions>

**Math Item Review Criteria and Multiple Representations are available at**

<http://engageny.org/resource/common-core-assessment-design>

---

<sup>3</sup> A distractor is an incorrect response that may appear to be a plausible correct response to a student who has not mastered the skill or concept being tested.

## New Mathematics Rubrics and Scoring Policies

The 2014 Grade 3 Common Core Mathematics Test will use rubrics and scoring policies similar to those used in 2013. Both the 2014 Mathematics 2-point and 3-point Rubrics have changed to more clearly reflect the new demands called for by the CCLS. Similarly, scoring policies have been amended to better address the CCLS Mathematics Standards. The new Mathematics Rubrics are as follows:

### 2-Point Holistic Rubric

<b>2 Points</b>	<p>A two-point response includes the correct solution to the question and demonstrates a thorough understanding of the mathematical concepts and/or procedures in the task.</p> <p>This response</p> <ul style="list-style-type: none"><li>• indicates that the student has completed the task correctly, using mathematically sound procedures</li><li>• contains sufficient work to demonstrate a thorough understanding of the mathematical concepts and/or procedures</li><li>• may contain inconsequential errors that do not detract from the correct solution and the demonstration of a thorough understanding</li></ul>
<b>1 Point</b>	<p>A one-point response demonstrates only a partial understanding of the mathematical concepts and/or procedures in the task.</p> <p>This response</p> <ul style="list-style-type: none"><li>• correctly addresses only some elements of the task</li><li>• may contain an incorrect solution but applies a mathematically appropriate process</li><li>• may contain the correct solution but required work is incomplete</li></ul>
<b>0 Points*</b>	<p>A zero-point response is incorrect, irrelevant, incoherent, or contains a correct solution obtained using an obviously incorrect procedure. Although some elements may contain correct mathematical procedures, holistically they are not sufficient to demonstrate even a limited understanding of the mathematical concepts embodied in the task.</p>

\*Condition Code A is applied whenever a student who is present for a test session leaves an entire constructed-response question in that session completely blank (no response attempted).

### 2-Point Scoring Policies

- Scoring Policies provided for past New York State Tests will **NOT** apply to the 2014 Common Core Mathematics Tests.
- New Scoring Policies are provided on page 12.

### 3-Point Holistic Rubric

<b>3 Points</b>	<p>A three-point response includes the correct solution(s) to the question and demonstrates a thorough understanding of the mathematical concepts and/or procedures in the task.</p> <p>This response</p> <ul style="list-style-type: none"> <li>• indicates that the student has completed the task correctly, using mathematically sound procedures</li> <li>• contains sufficient work to demonstrate a thorough understanding of the mathematical concepts and/or procedures</li> <li>• may contain inconsequential errors that do not detract from the correct solution(s) and the demonstration of a thorough understanding</li> </ul>
<b>2 Points</b>	<p>A two-point response demonstrates a partial understanding of the mathematical concepts and/or procedures in the task.</p> <p>This response</p> <ul style="list-style-type: none"> <li>• appropriately addresses most but not all aspects of the task using mathematically sound procedures</li> <li>• may contain an incorrect solution but provides sound procedures, reasoning, and/or explanations</li> <li>• may reflect some minor misunderstanding of the underlying mathematical concepts and/or procedures</li> </ul>
<b>1 Point</b>	<p>A one-point response demonstrates only a limited understanding of the mathematical concepts and/or procedures in the task.</p> <p>This response</p> <ul style="list-style-type: none"> <li>• may address some elements of the task correctly but reaches an inadequate solution and/or provides reasoning that is faulty or incomplete</li> <li>• exhibits multiple flaws related to misunderstanding of important aspects of the task, misuse of mathematical procedures, or faulty mathematical reasoning</li> <li>• reflects a lack of essential understanding of the underlying mathematical concepts</li> <li>• may contain the correct solution(s) but required work is limited</li> </ul>
<b>0 Points*</b>	<p>A zero-point response is incorrect, irrelevant, incoherent, or contains a correct solution obtained using an obviously incorrect procedure. Although some elements may contain correct mathematical procedures, holistically they are not sufficient to demonstrate even a limited understanding of the mathematical concepts embodied in the task.</p>

\*Condition Code A is applied whenever a student who is present for a test session leaves an entire constructed-response question in that session completely blank (no response attempted).

### 3-Point Scoring Policies

- Scoring Policies provided for past New York State Tests will **NOT** apply to the 2014 Common Core Mathematics Tests.
- New Scoring Policies are provided below.

### 2014 2- and 3-Point Mathematics Scoring Policies

Below are the policies to be followed while scoring the mathematics tests for all grades:

1. If a student does the work in other than a designated “Show your work” area, that work should still be scored. (Additional paper is an allowable accommodation for a student with disabilities if indicated on the student’s Individual Education Program or Section 504 Accommodation Plan.)
2. If the question requires students to show their work, and the student shows appropriate work and clearly identifies a correct answer but fails to write that answer in the answer blank, the student should still receive full credit.
3. In questions that provide ruled lines for students to write an explanation of their work, mathematical work shown elsewhere on the page should be considered and scored.
4. If the student provides one legible response (and one response only), teachers should score the response, even if it has been crossed out.
5. If the student has written more than one response but has crossed some out, teachers should score only the response that has **not** been crossed out.
6. Trial-and-error responses are **not** subject to Scoring Policy #5 above, since crossing out is part of the trial-and-error process.
7. If a response shows repeated occurrences of the same conceptual error within a question, the student should **not** be penalized more than once.
8. In questions that require students to provide bar graphs,
  - in Grades 3 and 4 only, touching bars are acceptable
  - in Grades 3 and 4 only, space between bars does **not** need to be uniform
  - in all grades, widths of the bars must be consistent
  - in all grades, bars must be aligned with their labels
  - in all grades, scales must begin at 0, but the 0 does **not** need to be written
9. In questions requiring number sentences, the number sentences must be written horizontally.
10. In pictographs, the student is permitted to use a symbol other than the one in the key, provided that the symbol is used consistently in the pictograph; the student does not need to change the symbol in the key. The student may **not**, however, use multiple symbols within the chart, nor may the student change the value of the symbol in the key.
11. If students are not directed to show work, any work shown will not be scored. This applies to items that do not ask for any work and items that ask for work for one part and do not ask for work in another part.

12. Condition Code A is applied whenever a student who is present for a test session leaves an entire constructed-response question in that session completely blank (no response attempted). This is not to be confused with a score of zero wherein the student does respond to part or all of the question but that work results in a score of zero.

## **Mathematics Tools**

### **Why Mathematics Tools?**

These provisions are necessary for students to meet Standard for Mathematical Practice Five found throughout the New York State P–12 Common Core Learning Standards for Mathematics:

#### **Use appropriate tools strategically**

*Mathematically proficient students consider the available tools when solving a mathematical problem. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a web site, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.*

On prior tests that measured prior grade-level standards, small symbols (rulers) were used to alert students that they should use math tools to help solve questions. These symbols will **NOT** appear on the 2014 Grade 3 Common Core Mathematics Test. It is up to the student to decide when it will be helpful to use the math tools to answer a question.

### **Rulers**

Students in Grade 3 must have a ruler for their exclusive use for all sessions of the test. Students with disabilities may use adapted rulers if this is indicated as a testing accommodation on the student's Individualized Education Program or Section 504 Accommodation Plan.

Note: Schools are responsible for supplying rulers for use with the Grade 3 Mathematics Test. NYSED does not provide them.

### **Calculators**

Students in Grade 3 are **NOT** permitted to use calculators on the 2014 Grade 3 Common Core Mathematics Test.
